

RECOMMENDED REORDER POINT REPORT

APS offers the option of storing reorder point values in the system to assist in managing inventory levels, as well as a maximum quantity level. The Recommended Reorder Point report can be used as a tool to display all items with or without a reorder point value assigned. Run control options allow for selection of only items where quantities are at or below a desired reorder level. Quantity on hand, quantity last received & quantity on order are also displayed within the report.
